

Data Analysis

Practical Evaluation Task II

Sunday, March 29, 2026
Duration: 1 Hour

XYZ Company operates in **India (IND)** and **New Zealand (NZ)**. The management wants to gain a better understanding of its workforce to inform strategic decisions regarding salary distribution, gender representation, departmental composition, bonuses, and overall company growth. You are tasked with analyzing the employee dataset and producing meaningful insights that the management can use to make informed decisions.

Note: Tenure refers to the number of years an employee has been with the organization.
To download a dataset, click [here](#).

Scenario 1 – Workforce Overview:

The owner of XYZ Company wants to know the overall picture of the workforce. Determine how many employees are in the company, the average salary, the average age, and the average tenure. Additionally, provide the percentage of female employees across the entire workforce and calculate what portion (%) of employees earn more than \$90,000.

Scenario 2 – Department and Gender Analysis:

Management is interested in understanding how employees are distributed across departments and gender. Find out how many employees are in each department and specifically how many females work in the Website department. Also, analyze the workforce by gender within each country and provide the average age, salary, and tenure for male and female employees in India and New Zealand.

Scenario 3 – Employee Information Retrieval:

The HR manager wants to quickly check an employee's profile by entering their name. Build a dynamic system where, when an employee's name is selected, all details related to that employee—such as gender, age, rating, date of joining, department, salary, country, and tenure—are displayed.

Below is an example:

Select an employee's name	Mark Daniel
Gender	Male
Age	24
Rating	Average
Date Joined	30-March-20
Department	Website
Salary	\$49,630
Country	Rwanda
Tenure	1

Scenario 4 – Bonus Calculation:

The company has introduced a bonus system to reward employees based on their tenure. Employees who have been with the company for at least two years receive 3% of their salary as a bonus, while those with less than two years receive 2%. Add a “**Bonus**” column to reflect this and identify the top 10 employees receiving the highest bonuses. Also Present the findings (top 10 employees) visually.

Scenario 5 – Company Growth Over Time:

The owner wants to understand how the company has grown over the years. Analyze the dataset to determine how many employees joined the company each year and create a line chart to illustrate this trend.

Scenario 6 – Reporting:

Finally, write a brief report summarizing your findings. Highlight the overall workforce composition, salary patterns, gender distribution, departmental insights, employees with the highest bonuses, and the growth trend of the company. Keep the report concise and professional.

Submission: Submit your Excel file along with the brief report before the end of the session. Ensure all tables, charts, and outputs are properly labeled and clear.

Submit your work (Excel File & Summary Report) by clicking [here](#).

THANK YOU!!!
